

MOViz_traj.py

Aim

MOViz_traj.py is a python3 script that is designed to represent the probability evolution of each model state present in the probtraj_table.csv file generated by FormatMaBoSS.pl.

How to run the script

The user should be in the same directory in which he or she ran FormatMaBoSS.pl. MOViz_traj.py can be run using the following command line:

```
python3 MOViz_traj.py folder_name
```

A help command line is also available:

```
python3 MOViz_traj.py help
```

The following libraries need to be installed:

```
pandas
matplotlib.pyplot
sys
matplotlib
xlsxwriter
numpy
seaborn
```

Outputs

The figure will both be displayed and saved.
